| <b>Description of Activity</b>                                   | <p>Dr.Siddarama Patil shared his research work and talked Publication Ethics. Topics covered were 'Writing an original research article', 'Writing an abstract', 'Why articles are rejected –views from a reviewer', 'Tips for effective scientific writing', 'Writing a case report' and 'Journals where you can publish your work'. The various sections of an original research article are abstract, introduction, materials and methods, results, discussion, conclusion, acknowledgements, references and figures and tables. Let us now examine the first section of a paper, the abstract. An abstract can be regarded as an abbreviated and accurate representation of the paper contents. Abstracts can be unstructured, in IMRaD format(Introduction, Methods, Results and Discussion) or in an eight heading format. Key words help in indexing and retrieval. Common reasons why articles are rejected are that they are sent to the wrong journal, the article does not follow the word limits of the journal or is not prepared in accordance with the journal instructions, errors with presentation, grammar and language, problems with the theoretical framework, references to appropriate literature are lacking or there are serious methodological flaws. A narrative structure should link together various parts of the paper. Sentences should be short, written in active voice and address one thought at a time. Unnecessary words should be deleted and short and simple words used instead of long and complicated ones.</p> |
