

Course Title:	Mathematics for Computer Science and Engineering Stream-II		
Course Code:	22MATS21	CIE Marks	50
Course Type (Theory/Practical/Integrated)	Integrated	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P:S)	2:2:2:0	Exam Hours	03+02
Total Hours of Pedagogy	40 hours Theory+10-12 Lab slots	Credits	04

Course objectives : The goal of the course **Advanced Calculus, Transforms and Numerical methods (22MATS21)** is to

- **Familiarize** the importance of Integral calculus and Vector calculus essential for Computer science and engineering.
- **Analyze** electronics and electrical engineering problems applying Partial Differential Equations.
- **Develop** the knowledge of solving Computer science and engineering problems numerically.

Teaching-Learning Process

Pedagogy (General Instructions):

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the delivered lessons shall develop student's theoretical and applied mathematical skills.
2. State the need for Mathematics with Engineering Studies and Provide real-life examples.
3. Support and guide the students for self-study.
4. You will also be responsible for assigning homework and quizzes, and documenting students' progress.
5. Five assignment problems on each module.
6. Encourage the students for group learning to improve their creative and analytical skills.
7. Show short related video lectures in the following ways:
 - As an introduction to new topics (pre-lecture activity).
 - As a revision of topics (post-lecture activity).
 - As additional examples (post-lecture activity).
 - As an additional material of challenging topics (pre-and post-lecture activity).
 - As a model solution of some exercises (post-lecture activity).

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Apply the knowledge of Integral calculus to solve Double and Triple integral for evaluating surface area and volume related to Computer Science and Engineering.
CO2	Apply the knowledge of Linear Algebra to find the linear space, basis, dimensions and linearly independent, linearly dependent of vector space
CO3	Apply the concept of numerical techniques to solve algebraic and non-algebraic equations for Computer Science and engineering problems, Studying the Forward and Backward Finite differences and solve the problems on Interpolation.
CO4	Apply the knowledge of Laplace transform from time domain to frequency domain (Signal and image processing) which transforms differential equation into algebraic equation (Partial fractions).

C05	Demonstrate the various physical modules through higher differential equations and solve such linear ordinary differential equations related to the Computer Science and Engineering.
C06	Familiarize with modern mathematical tools namely SCILAB /PYTHON /MATLAB / MATHEMATICA

Bloom's level of the course outcomes:

CO#	Bloom's Level					
	Remember (L1)	Understand (L2)	Apply (L3)	Analyze (L4)	Evaluate (L5)	Create (L6)
C01	√	√	√			
C02	√	√	√			
C03	√	√	√			
C04	√	√	√			
C05	√	√	√			

Course Articulation Matrix / Course mapping :

CO#	P01	P02	P03	P04	P05	P06	P07	P08	P09	P010	P011	P012	PS01	PS02	PS03
C01	3	2	2		1				1			1			
C02	3	2	2		1				1			1			
C03	3	2	2		1				1			1			
C04	3	2	2		1				1			1			
C05	3	2	2		1				1			1			

Note: 1-Low mapped, 2-Medium mapped, 3-High mapped

Module-1 : Definite Integral and Improper Integral.

Introduction to Integral Calculus in Computer Science Engineering applications.

Multiple Integrals: Evaluation of double and triple integrals, evaluation of double integrals by change of order of integration, changing into polar coordinates. Applications to find: Area by double integral. Problems.

Beta and Gamma functions: Definitions, properties, relation between Beta and Gamma functions. Problems.

Self-Study: Volume by triple integration, Center of gravity.

Applications: Applications to mathematical quantities (Area, Surface area, Volume),. Analysis of probabilistic models.

(RBT Levels: L1, L2 and L3)

(8 hours)

Module-2 : Advanced Linear Algebra

Importance of Vector Space and Linear Transformations in the field of Computer science and engineering applications.

Vector spaces: Definition and examples, subspace, linear span, Linearly independent and dependent sets, Basis and dimension.

Linear transformations: Definition and examples, Algebra of transformations, Matrix of a linear transformation.

Self-study: Change of coordinates, Rank and nullity of a linear operator, Rank-Nullity theorem. Inner product spaces and orthogonality. Angles and Projections. Rotation, reflection, contraction and expansion.

Applications: Image processing, AI & ML, Graphs and networks, computer graphics.

(RBT Levels: L1, L2 and L3)

(8 hours)

Module - 3: Numerical Methods

Importance of numerical methods for discrete data in the field of Computer science and engineering applications.

Solution of polynomial and transcendental equations: Regula-Falsi method and Newton-Raphson method (only formulae). Problems.

Finite differences, Interpolation using Newton's forward and backward difference formulae, Newton's divided difference formula and Lagrange's interpolation formula (All formulae without proof). Problems.

Self Study: Bisection Method, Secant method, Numerical differentiation and Inverse Lagrange's method.

Applications: Power Systems

(RBT Levels: L1, L2 and L3)

(8 hours)

Module - 4 : Laplace Transforms

Introduction to Laplace Transforms in Computer Science & Engineering.

Laplace Transforms: Definition, Laplace transforms of Elementary functions, properties (without proof) periodic function, Unit step function, Unit impulse function.

Inverse Laplace Transforms: Definition, Illustrative examples on Laplace transform, Convolution Theorem (without proof) and Finding Inverse Laplace transform by convolution Theorem. Solution of Linear Differential equations using Laplace Transforms and Applications (5 Assignment Problem).

Self-Study: Solution of first order simultaneous differential equation and Laplace transform of derivative.

Applications: Network analysis, Signal Processing, and Image Processing.

(RBT Levels: L1, L2 and L3)

(8 hours)

Module-5 : Ordinary Differential Equation-2

Introduction to Linear ordinary differential equations of second and Higher order for handling Computer Science and Engineering applications.

Solution of second and higher order Ordinary Linear Differential Equations with constant coefficients, Inverse Differential Operator Method (Types -I, II and III only), Variation of Parameters method, applications of Differential equations LCR Circuits.

Self-Study: Singular Solutions and Inverse Differential Operator Method (Types -IV and V).

Applications: Application of second order ODE, initial conditions and initial value problems.

(RBT Levels: L1, L2 and L3)

(8 hours)

List of Laboratory experiments (2 hours/week per batch/ batch strength 15)

10 lab sessions + 1 repetition class + 1 Lab Assessment

1	Evaluation of Double and triple integrals.
2	Evaluation of Beta and Gamma functions.
3	Finding surface integrals
4	Evaluation of surface area by Green's theorem.
5	Formation of PDE w.r.t. one independent variable.
6	Solution of PDE by direct integration.
7	Newton's forward and Backward interpolation formula.
8	Solution of numerical integration by Simpson's (1/3) rd rule.
9	Finding the roots for second order ODE.

[Handwritten signatures and marks at the bottom of the page]

10	Finding the roots by the method of variation of parameter.
Suggested software's : Mathematica/MatLab/Python/Scilab	
<p><u>Assessment Details (both CIE and SEE)</u></p> <p>The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing marks for the CIE is 45% of the maximum marks (22.5 marks out of 50). The minimum passing marks for the SEE is 35% of the maximum marks (18 marks out of 50).</p> <p>A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.</p> <p><u>Continuous Internal Evaluation(CIE):</u></p> <p>The CIE shall be conducted by the course teacher throughout the semester. The CIE marks for the theory component of the IC shall be 30 marks and for the laboratory component 20 Marks. The CIE marks for the theory component shall be 50 marks and scored will be reduced to 30.As below</p> <ul style="list-style-type: none"> • Three Tests each of 15 Marks; after the completion of the syllabus of 35-40%, 65-70%, and 90- 100% respectively. Average of Best Two performances of the Internal Tests shall be considered for 15 Marks. • Session wise assignments for 25 marks • For Seminar and library work 05 marks • Attendance 5 marks (95% to 100%), 04 marks (85% to 94%) <p><u>CIE for the practical component of the IC:</u></p> <ul style="list-style-type: none"> • On completion of every experiment/program in the laboratory, the students shall be evaluated and marks shall be awarded on the same day. The 35 marks are for conducting the experiment and preparation of the laboratory record, the other 15 marks shall be for the test conducted at the end of the semester. • The CIE marks awarded in the case of the Practical component shall be based on the continuous evaluation of the laboratory report. Each experiment report can be evaluated for 50 marks. Marks of all experiments' write-ups are added and scaled down to 20 marks. <p><u>Semester End Examination(SEE)</u></p> <ol style="list-style-type: none"> 1. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50. 2. The question paper will have ten full questions carrying equal marks. 3. Each full question carries 20 marks. 4. There will be two full questions (with a maximum of three sub questions) from each module 5. Each full question will have sub questions covering all the topics under a module. 6. The students will have to answer five full questions, selecting one full question from each module. <p><u>Suggested Learning Resources:</u></p> <p>Books (Title of the Book/Name of the author/Name of the publisher/Edition and Year)Text Books</p> <ol style="list-style-type: none"> 1. B.S.Grewal:“Higher Engineering Mathematics” , Khanna publishers, 44th Ed.,2021. 	

2. **E. Kreyszig:** "Advanced Engineering Mathematics", John Wiley & Sons, 10th Ed., 2018.
